

Carbon Engagement Statement

The Tanzania Airports Authority (TAA) is committed to reduce carbon emissions and promoting sustainability in airport operations. In alignment with global environmental goals and regulatory requirements, we have adopted a structured and collaborative approach to minimizing our carbon footprint. We pledge to implement and maintain Airport Carbon Accreditation (ACA) certification, ensuring continuous improvement in greenhouse gas (GHG) emission reduction across all airport facilities.

Scope of Engagement

This initiative focuses on the following key areas:

1. **Comprehensive Carbon Footprint Assessment** – Conducting detailed evaluations of GHG emissions across airport operations to establish a baseline and identify targeted reduction opportunities.
2. **Implementation of Emission Reduction Strategies** – Developing and executing effective measures, including improving energy efficiency, adopting renewable energy solutions, optimizing waste management, and promoting sustainable transportation systems.
3. **Regulatory Compliance & Global Alignment** – Ensuring strict adherence to national and international sustainability standards.
4. **Collaborative Stakeholder Engagement** – Partnering with airlines, concessionaires, ground handling service providers, and other stakeholders to foster collective action towards achieving substantial carbon reductions.
5. **Monitoring, Reporting & Continuous Improvement** – Establishing robust key performance indicators (KPIs) to track progress, ensure accountability, and regularly report outcomes to relevant authorities and stakeholders.

This engagement will be periodically reviewed and updated to reflect evolving sustainability requirements and best practices. Through these concerted efforts, TAA reaffirms its unwavering commitment to environmentally responsible airport operations and Tanzania's broader sustainability vision.
